Algebra can essentially be considered as doing computations similar to those of arithmetic. A unit quaternion is a quaternion of norm one. Dividing a non-zero quaternion  $q$  by its norm produces a unit quaternion  $u_q$  called the versor of  $q$ :  $u_q = \frac{q}{\|q\|}$ . Every quaternion has a polar decomposition  $q = \|q\| \cdot u_q$ . Using conjugation and the norm makes it possible to define the reciprocal of a non-zero quaternion. The product of a quaternion with its reciprocal should equal 1, and the this site is intended as a resource for university students in the mathematical sciences.
